

Python-Django

Random Word API

Gaurav Gupta
tuteur.py@gmail.com

Prerequisite:

- Little bit Python

What We will Learn:

- We are going to make a web API using Django that generates Random Words.
- This API will be hosted on <https://www.pythonanywhere.com/>
- Download Required source code files from: https://github.com/tuteurpy/training_projects/
- Watch Tutorial Video available on youtube : <https://youtu.be/hbBKOVbe07Q>

You will need to add the following to the file urls.py (Don't copy-paste the code. Type it or otherwise it might create issues)

```
from . import views  
path("", views.home),  
path('randomword', views.randomword)
```

You can use this API to get random words in the Hangman-Game Project.
