Python-Django
Random Word API

Gaurav Gupta
tuteur.py@gmail.com

Prerequisite:

- **Little bit Python**

What We will Learn:

- **We are going to make a web API using Django that generates Random Words.**
- **This API will be hosted on https://www.pythonanywhere.com/**
- **Download Required source code files from:** https://github.com/trainerCpp/PythonTraining
- **Watch Tutorial Video available on youtube :** https://youtu.be/OtPe5vxScEI

You will need to add the following to the file urls.py (Don't copy-paste the code. Type it or otherwise it might create issues)

from . import views

path('', views.home),

path('randomword', views.randomword)

You can use this API to get random words in the Hangman-Game Project.
